Office Action Summary	Application No. 10/747,792	Applicant(s) AERRABOTU ET AL.	
	Examiner Thai D. Hoang	Art Unit 2667	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on Application filed 12/29/2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7, 9-24 and 26-36 is/are rejected.
- 7) ☒ Claim(s) 8 and 25 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 December 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 12 and 29 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The statement "wherein the flash with information message comprises at least one of a flash with information message and an extended flash with information message" recited in claims 12 and 29 is not clear. It's confusing what is meant by "a flash with information message and an extended flash with information message".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7, 9-24 and 26-36 are rejected under 35 U.S.C. 102(b) as being unpatentable by Vainio et al, US Patent No. 6,577,721 B1, hereafter referred to as Vainio.

Regarding claims 1, 5, 10, 13-14, 22, 27 and 31 Vainio discloses a method and system called "Conference call". Vainio discloses the method comprises a process for

setting up a conference call where the calling party is using a radiotelephone is as follows:

The radiotelephone transmits to the network the telephone number that it wants to call. If the called party is not busy, the calling radiotelephone is alerted and the connection is established when the called telephone is brought off the hook (i.e. is answered). Once this call has been established, the calling party, via the radiotelephone, requests the telecommunication network to put this call on hold; col. 3, lines 33-44 (establishing a connection with a first party; and transmitting a flash with information message on a reverse link signaling channel, the flash with information message including a connection control information record that controls a connection status of the connected first party).

Regarding claims 2 and 19, the step of requesting for setting up a conference in the method disclosed by Vainio inherently comprises a multi-user connection information because it is a telephone conference (wherein the connection control information record comprises a multi-party connection control information record).

Regarding claims 3, 15, 20 and 32, in the setup process, Vainio discloses when a first call has been established between the calling party and the first called party, the calling party, via the radiotelephone, requests the telecommunication network to put this call on hold, col. 3, lines 43-44, col. 4, lines 57-58 (wherein the connection status includes one of a party audio mute status, a party hold status, a party active status, and a party disconnect status).

Regarding claims 4, 16, 21 and 33, Vainio discloses the calling party uses member identification number stored in the memory for setting the conference, col. 3, line 64-col. 4, line 6 (wherein the connection control information record includes a connection reference field having a unique identifier assigned to the first party).

Regarding claims 6 and 23, Vainio discloses the first connection is maintained while establishing the second connection with the second called party; col. 3, lines 42-49, col. 5, lines 10-19 (establishing a connection with a second party while maintaining the connection with the first party).

Regarding claims 7 and 34, Vainio discloses that the connection for the conference call group is established for each of conference call participants. Therefore, it holds the second party while establishing a connection with the first conference call participant, col. 3, line 62 – col. 4, line 39 (wherein transmitting the flash with information message further comprises transmitting the flash with information message on the reverse link signaling channel to place the second party on hold while activating a status of the first party).

Regarding claims 9 and 26, Vainio discloses that the connection for the conference call group is established for each of conference call participants. Therefore, it activates a status of the first party while maintaining an active status of the second party, col. 3, line 62 – col. 4, line 39 (wherein transmitting the flash with information message further comprises transmitting the flash with information message on the reverse link signaling channel to place the second party on hold while activating a status of the first party).

Regarding claims 11 and 28, Vainio discloses the calling party and a base station exchange information to set up a conference, col. 3, lines 29-50, col. 4, line 52 - col. 5, line 23, col. 5, line 49 - col. 6, line 12 (wherein the reverse dedicated signaling channel comprises a communication path that exists between a specific mobile station and a base station for the exchange of control information from the specific mobile station to the base station).

Regarding claims 12 and 29, as best understood, Vainio discloses that the connection for the conference call group is established for each of conference call participants. Therefore, the exchanged information between the calling party and the system inherently comprises information of all of conference call participants.

Regarding claims 18, 30 and 35, Vainio discloses the system (fig. 1) comprises:
a transmitter 8 and a receiver 9 (a transceiver);

a controller 11 coupled to the transmitter 8 and the receiver 9 to control for establishing connections with a plurality of conference call participants. The controller generates messages, which is transmitted on a signaling channel, to control connection between all of conference call participants, col. 3, lines 29-50, col. 4, line 52 - col. 5, line 23, col. 5, line 49 - col. 6, line 12 (a controller coupled to the transceiver, the controller configured to establish a connection with a first party via the transceiver; a flash with information message generation module configured to generate a flash with information message including a connection control information record that controls a connection status of the connected first party, wherein the controller is further configured to transmit flash with information message on a reverse link signaling channel via the transceiver).;

a memory 12 coupled to the controller 11 for storing conference call participant identifiers, col. 3, line 62 – col. 4, line 23, col. 5, lines 45-65 (a party identifier storage module configured to store a party identifier associated with the first party).

Allowable Subject Matter

Claims 8 and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following references are cited to further show the state of the art with respect to the application:

US Patent No. 6,198,945 B1, Chen et al, "Method for providing a dial tone for use in wireless environments."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thai D. Hoang whose telephone number is (571) 272-3184. The examiner can normally be reached on Monday-Friday 10:00am-18:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on (571) 272-3179. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
